Brainstorming & Idea Prioritization Template

Date	30 September 2026
Team ID	6ab4e2eba238dc999eb5fb00
Project Name	**Script-Controlled ACL – Restrict Record Access Based on Field Value**
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	T.Aswini – Project Leader	Restrict record access based on the Branch field	Security / ACL	1
2	V.Yogesh- Team member	Create different user roles for Read, Create, Write and Delete operations	Access Control	1
3	AA Aswin- Team member	Allow users to view only records belonging to the EEE branch	Record-Level Security	1
4	SV Vijayasree- Team member	Use a script in the Read ACL to check the Branch value	Scripting / ACL	1
5	R.Rabish- Team member	Create sample ECE, EEE and CSC records for testing access restrictions	Testing / Data	1
6				

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Restrict access to Institution	High	High	1	Yes

Brainstorming & Idea Prioritization Template

	Details records based on the **Branch** field using a Script-Controlled Read ACL				
2	Create separate roles (**BB1, BB2, BB3, BB4**) for Read, Create, Write, and Delete operations	High	High	2	Yes
3	Create ECE, EEE, and CSC sample records and test role-based and field-based access	High	High	3	Yes

The team evaluated the grouped ideas based on feasibility and importance. The primary idea selected was to implement a Script-Controlled ACL that restricts access to Institution Details records according to the Branch field. This idea was considered highly feasible because it can be implemented using the ServiceNow ACL configuration and scripting features, and it directly addresses the project's main security requirement.

The team also selected the creation of separate roles for Read, Create, Write, and Delete operations. Sample ECE, EEE, and CSC records were included to demonstrate and validate the access-control behavior. These ideas were prioritized because they directly support the implementation, testing, and demonstration of the proposed solution.

Based on the prioritization, all three grouped ideas were selected for further development in the subsequent project phases.
